## HOW TO MEASURE A POOL

### Measuring a pool for a thermal pool cover

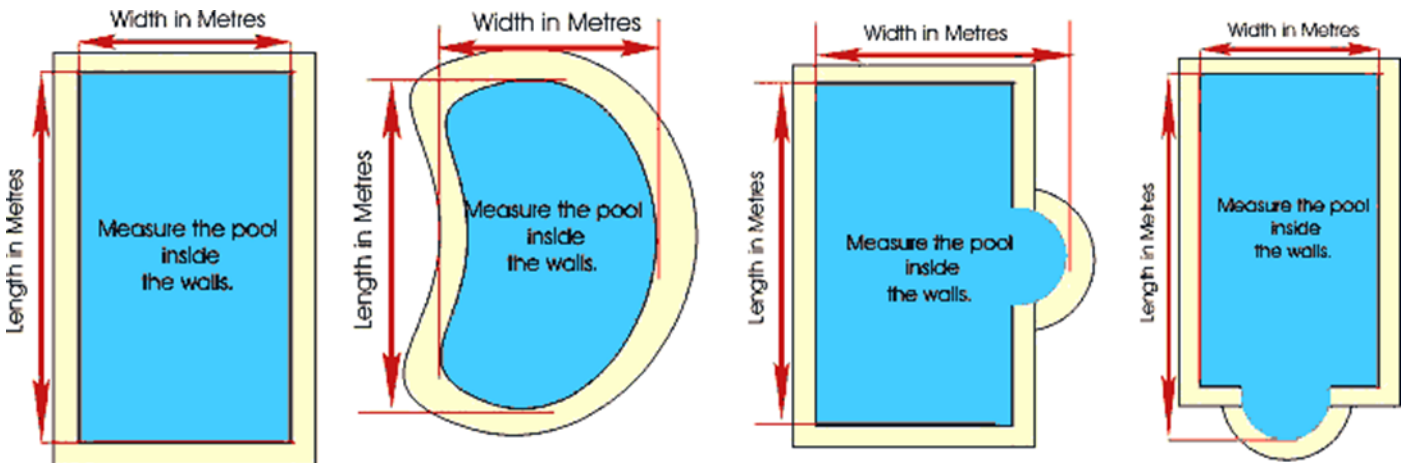

#### Step 1

Obtain longest length and longest width. Measurements are taken from the inside face of the pool at one end, to the inside face at the opposite end, to determine the longest and widest points of the pool.

Measure the length of the pool on both sides. Measure the width of the pool on both sides.

#### ◇ Kidney Shaped Pools

Use a straight line at one side of the pool (see sketch) and measure from one end of the pool over the total length.

#### Step 2

The measurement is taken from the inside wall of the pool at one end, to the inside wall at the opposite end, to determine length and width.
